Software Engineer

[Motorola Solutions](#)

Sept 2024–Present

[VestaNXT - Analytics](#)

Remote, Brazil

Motorola Solutions (Vesta Analytics) – Public safety data platform processing high-volume emergency call data to generate actionable insights and reports.

- Reduce the SQL query used to generate call reports from more than **40 min to seconds** managing the sql query prioritizing the execution order and index usage to avoid any type of table or index scan.
- Optimized the call history REST API by moving phone number processing from SQL Server stored procedures into the application layer and leveraging indexed queries, reducing response time by ~50%.
- Created the first regression test suite to ensure stability and reliability of core product functionalities.
- Managed team testing environments across AWS and on-premise infrastructure, acting as the main point of contact and resolving over 50% of operational and dependency-related issues, minimizing disruptions and maintaining delivery timelines.
- Collaborated directly with clients to resolve data migration challenges, ensuring secure, reliable handling of critical data during product version upgrades.
- Designed and implemented **Grafana dashboards** to monitor **RabbitMQ (event-driven messaging) metrics**, integrating **real-time alerts with Google Chat**, which improved error visibility and **reduced message troubleshooting time by 50%**.
- Developed and implemented AI-driven workflows using agents and reusable skills to accelerate delivery and improve code quality through automation and intelligent assistance.
- Skills: AI, Claude, Playwright, Angular, TypeScript, C#, .NET, SQL Server, AWS, Windows server

Software Engineer

[Plin Energia](#)

2022–2024

Hybrid, Brazil

Plin Energia – Solar energy startup in Maringá serving 4000+ customers.

- Developed the customer management system supporting 4,000+ users and 30+ operators using AWS, Node.js, TypeScript, NestJS, Heroku, and PostgreSQL.
- Designed and launched a “single bill” product, simplifying payments into one invoice, improving customer experience. Implemented with AWS, SQS, Node.js (fastify), TypeScript, PostgreSQL, Workers, and scheduled jobs.
- Built the company’s first microservice for notifications, sending ~8,000 monthly messages via email and mobile using AWS Lambda and DynamoDB.
- Created scalable automation for PDF-reading web scrapers, focusing on accuracy and reusability with Python, AWS SQS, Node.js, and TypeScript.
- Implemented CI/CD pipelines ensuring safe, continuous delivery with test validation before production.
- Integrated payment gateways with webhook handling, structured logging, graceful shutdown, and queue-based processing for reliability.
- Skills: Node, Typescript, Python, AWS, GitHub, PostgreSQL, Serverless, Docker, NestJS.

Beyond Work

- Passionate about practicing programming and related topics by building real-world-inspired projects such as Redis, Immutable Ledger, Windows File Search Engine, Shell, among others [GitHub](#).

Education

- **M.Sc. Distributed Software Engineering**, PUC Minas, Brazil. 2023–2025
- **B.Sc. Computer Science.**, UEM, Maringa, Brazil. 2019–2023
